URL-Complete

Allow ZeroCount

Create Monitor Point

The AGS Secure Feature Service URL monitoring point checks an ArcGIS Server Secure Feature service for layer data and provides a count of the number of records returned.

The script can be used whether or not you have a non-standard installation.

The parameters that are unique to the AGS Feature Service URL include:

Server Name	DNS name of server where AGS service is located
Service Name	Name of the Rest Feature or Image Service on an ArcGIS Server. If service is name of folder/service is needed.
UserID	ArcGIS Server Admin user ID using either Windows or ArcGIS Server security
UserPW	ArcGIS Server Admin user password
URL-Complete	This parameter can be retrieved from the REST interface of the service and e parameters to test. Copy the parameters from the 'URL' In the address bar of
Allow ZeroCount	(Optional) Enter 'YES' for that services that can return zero records under no operations, so that the point won't be considered down.

For non-secured AGS Feature Service URLs, refer to the [AGS Feature Service URL](#) monitoring point script

Retrieving the URL-Complete parameter from the REST service is a several step process.

Step 1.1: Open your Internet browser and enter the URL for your ArcGIS® Rest Services Interface

Example:

http://YourServerName/ArcGIS/Rest/Services

ArcGIS Services Directory

[Home](#)

Folder: /

Current Version: 9.31

View Footprints In: [Google Earth](#)

Folders:

• **Your Folders**

Services:

Step 1.2: In the bottom left of the browser screen, locate “Supported Operations “

Click on **[Query]**

Supported Operations

Step 1.3: In the browser window, enter the query parameters you would like to monitor. Change the form to **Query**.

Step 1.4: Copy the complete URL from the browser address field

Step 2: Paste the complete URL in the **URL-Complete** field Provided

Step 3: Click **[Create Monitor Point]**
