

# AGS Map Service URL

The AGS Map Service URL monitoring point checks an ArcGIS Server Map Service if a valid image (not blank [white]) is returned.

The parameters that are unique to the AGS Map Service URL include:

Server Name	DNS name of server where AGS service is located
Service Name	Name of Rest Map or Image Service on an AGS server. If service is under a folder/service is needed.
URL-Complete	This parameter can be retrieved from the REST interface of the service AND parameters to test. Copy the parameters from the 'URL' In the address bar of

If your AGS Map Service URL is secure, use the [AGS Secure Map Service URL](#) monitoring point script.

Retrieving the URL-Complete parameter from the REST service is a several step process.

**Step 1.1:** Open your Internet browser and enter the URL for your ArcGIS® Rest Services Interface

Example:

http://YourServerName/ArcGIS/Rest/Services

**Folder: /****Current Version:** 9.31**View Footprints In:** [Google E](#)**Folders:**• **Your Folders****Services:**

**Step 1.2:** In the bottom left of the browser screen, locate "Supported Operations"

Click on **[Export Map]**

**Supported Interfaces:** [REST](#) [SOAP](#)

**Supported Operations:** [Export Map](#) [Id](#)

**Step 1.3:** In the browser window, select "Image" from the Format drop-down list

Click the **[Export Map Image]** button
