# Windows Service

The Windows Service monitoring point checks a Windows Service to see if it is up and running. If security information is needed to communicate with the server, Username and Passwords are required.

The parameters that are unique to the Windows Service include:

Server Name	DNS server name to check for windows service
Win Svc-Short name	Service name to check – get **short name** from 'services' Microsoft Managem (MMC) Note: ***Short Name for Windows Service is required*** --- a name with spa work. Substitute a '?' character for any spaces
Domain	Network Security Domain Name
userID	User ID for Web Application *Note: userID should be entered as encrypted information*
userPW	User PW for Web Application *Note: userPW should be entered as encrypted information*
