

Settings - Reports

This is where optional report settings for the Charts and Reports section can be saved. You can set custom thresholds for the GSM Uptime Report here to change when columns are flagged with warning colors for being slow or down.

Settings Details

Uptime Report - Slow Thresholds

Here you can add in your lower and upper thresholds for flagging slow point percentages. The default is set that points with slow times ranging between 10%-20% of the time will be marked with a yellow color to indicate a warning. You can customize and save the values here.

Uptime Report - Up Thresholds

Here you can add in your lower and upper thresholds for flagging low up time percentages. The default is set that points with up times ranging between 75%-85% time will be marked with a red color to indicate a warning. You can customize and save the values here.
