

License Manager Reports

The initial view of the charts and reports module includes six tabbed focus areas. The sixth of these is the **License Manager Reports** area.

The screenshot shows a web interface with a horizontal tabbed menu at the top. The tabs are: GSM Performance Charts, AGS Performance Charts, AGS Usage Reports, SDE Usage Reports, License Manager Charts, and License Manager Reports (which is the active tab). Below the tabs is a form with the following fields:

- From:** A date input field containing "07/14/2018" and a calendar icon.
- To:** A date input field containing "08/14/2018" and a calendar icon.
- Report Templates:** A dropdown menu with "Detailed User" selected.
- Username:** A dropdown menu with "ADMINISTRATOR" selected.
- Orientation:** A dropdown menu with "Portrait" selected.
- Font Size:** A dropdown menu with "10" selected.
- Create:** A blue button.

The right side of the form is a large empty rectangular area, likely for the report output.

First, choose a **Report Template**. Presently, there are two report templates to choose from.

- **Detailed User** - (need content)
- **User Summary** - (need content)

If running a **Detailed User** report, then use the next dropdown box to choose the **Username** to report on.

If running a **User Summary** report, then use the next dropdown box to choose a **Vendor : Manger** license server to report on.

The **Orientation** option allows the standard **Portrait** or **Landscape**. For most cases, the default portrait orientation will suffice. Use landscape orientation in cases where vendor, manager, or computer names are very long.

The **Font Size** option is also present to assist with cases of very long names. If you find your service names being truncated by an ellipsis '...', then try lowering the font size.

A note on the report PDF output:

In **Chrome** and **Firefox**, the report should be generated in the pane to the right of the options.

In **Internet Explorer**, the report should behave as a download, and will need to be opened in an external PDF viewer.

Select a **From** and **To** date in addition to the inputs above, and press the **Create** button to load the report.

The image below is an example output in Chrome.
