GeoSystems Monitor Database Backup

The GeoSystems Monitor performs an automated backup daily of the SQLite monitoring database to the GeoMonEngine/bu folder. The daily backup databases are named with a date and are placed in a backup folder located in the same folder that the live monitor database is contained in. Additional systems level backup of the GeoSystems Monitor, including backup of the history SQLite and the SDE and AGS SQLite or MS SQL Usage databases, is your organizations responsibility and should be a part of your organizations routine backup procedures.
