Suggestions for Best Monitoring Results

For best monitoring results, we'd like to offer some suggestions:

1. Run the monitoring platform 24/7

2. Place your monitoring platform in a location within your IT infrastructure that allows access to the GIS resources needed to monitor.

3. Industry best practice is not to install the GeoSystems Monitor on a server that you are monitoring

4. Make sure you are receiving the daily Status Report email. This email is verifying that the GeoSystems Monitor is up and running. If you are not receiving this email, please call us at 1-877-9VESTRA.
