

Changing the System Administrator Password

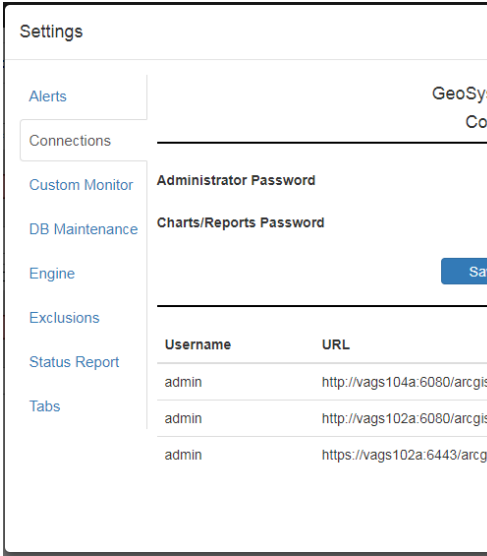

The purpose of the System Administrator account is to provide application access.

The default password of the System Administrator account is 'geo.' We suggest you change the default password. It can be changed in the selection box at the top of the "Settings - Connections" tab.

The System Administrator login has full permissions with system settings.

On the left sidebar, click on Settings, then click the Connections button.

Once you have changed the password, click the Save Changes button to complete the change.
