

GeoSystems Monitoring Licensing

License Levels

Understanding that each organization has different GIS requirements, the GeoSystems Monitor is licensed with different levels, based upon the organization's needs. The default levels are:

- Level I, for 1-100 points
- Level II, for 101- 200 points
- Level III, Unrestricted

Site licensing is also available for organizations that may need multiple installations of GeoSystems Monitor in one or more location. Your service representative can provide information on this licensing structure.

License Status

GeoMonitor displays the status of your organization's license on the Dashboard.

The number of monitoring points used is displayed in the lower left of the dashboard.
