MSSQL SDE List Tables

The **MSSQL SDE List Tables** monitoring point is designed to work together with the **MSSQL SDE Usage** SDE Usage reporting. It is recommended that these two checks be placed together in a GeoMonitor Server generate the data required to support SDE Usage reporting.

The MSSQL SDE List Tables check runs once a week based on a time stamp stored in the GeoMonitor data (version 10.0 and greater) geodabase feature datasets, feature classes and tables in a Microsoft SQL Datab feature datasets, feature classes and that are unused for SDE Usage reporting. The MSSQL SDE Usage ch feature datasets, feature classes and tables are open. A more detailed description of the MSSQL SDE Usage

Note: If you are using Microsoft SQL Server / SQL Server Express, follow the instructions in Setting Up M

If you are not sure where your Usage information is being stored, you can consult the "About" dialog on th

The parameters that are unique to the MSSQL SDE List Tables include:

Server Name	DNS name of server where the SQL database is located
Database	Database name to check **(must match Usage Check)**
userID	User ID with access to the MSSQL Table. If using Windows AD authentication Domain\\UserID

	Note: *userID should be entered as encrypted information*
userPW	User PW for access to the MSSQL Table ***Note:*** *userPW should be entered as encrypted information*
Rpt-DSN:User:Pwd	Needed only if using RDBMS to store usage information – string must include YourODBC_ConnectionName:UserID:UserPW
Opt-User Schema	Defaults to SDE, or enter DBO."
